                                                                                                  page, and an iso-electric point of about 5. The amylase has optimum activity at about 55 degrees C and pH 9.5, and can be used in the production of improved detergents, e.g. laundry and hard surface cleaning detergent compositions. It is also useful in the production of sweeteners and ethanol from starch and also in the conventional starch-converting processes such as liquelaction and saccharilication. Alpha-amylase may
                                                                                                                                                                                              This is a Bacillus species alpha-amylase amino acid sequence. The alpha-amylase is derived from a strain of Bacillus, the preferred strain is Bacillus sp. NGIMB 40916. The mature protein sequence and the polynucleotide coding for the mature protein sequence are specifically claimed. The protein has a molecular weight of 55kb, as determined by she claimed. The protein has a molecular weight of 55kb, as determined by she

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULI 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of anlagonising, inhibiting or interlexing with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection and meningitis. A05591 to A05614 represent primers used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequences have antibacterial and antiinflammatory properties.

The profein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and in
                                                                                                                                                                                                                                          02-OCT-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diagnostic assays. The proteins and nucleotides can be useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Y81501 to Y81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. A05407 to A05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae.
                                                   Misc-difference

Antibodies which bind the protein are used to detect corresponding antiquens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 c.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, offils media or meningitis. A05407 to A05590 represent specifically claimed nucleotide sequences isolated from S. pneumonide. The sequences haze antibacterial and antibullammatory properties. The protein sequences, and fragments of them, are useful as immunodens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chaim 6; Page 89; 108pp; English.

The R22lH mutation results from a point mutation of the LAMAN coding sequence (see 191094). A claimed method for diagnosing or screening for bam comprises detecting the presence of bam causing mutations in the LAMAN gene: another point
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mutation causing bam in Angus and related breeds of cattle has also been identified. PCR primers (see T91088 99) are provided for use in a claimed method for detecting these mutations. Compared with known enzymatic methods, smaller samples are needed, LNA is stable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosis and screening for bovine alpha mannosidosis: by detect mutation(s) in alpha-mannosidase gene, also nucleic acid encoding the enzyme and derived oligonucleotide primers

                                                                             comparises detecting the presence of absence of bam causing mutations in the LAMAN gene; another point mutation causing bam in Galloway earlie has also been identified. Priv primers (see T94000-8-93) are provided for use in a claimed method for detecting these mutations. Compared with known enzymatic methods, smaller samples are needed, DNA is stable during transport and storage, and the test is more

RAVE and PCR amplification were used to obtain the complete rat alpha-d sequence diven in 091715. Rat alpha-d I domain/human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Location/Qualifiers

A monoclonal antibody that is specific tor ratelpha 4 subunit, and which is secreted by hybridoma 199M (AFCC HB 12058), is claimed. It may be used to modulate alpha decrivity, interlers with human alpha deand treat or prevent diseases such as type I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cDNA library. Alpha d is involved in cell migration, phagocytosis and cell-cell interaction. Recombinant alpha d polypeptides can be expressed in transformed host cells for use in assays for

                                                                                                                                                                                                                                                                    the present sequence represents rat alpha d. The present invention describes: (1) an antibody that specifically binds alpha d. which is a beta 2 integrin alpha-submill polyapptide; (2) a monoclonal antibody as in (1); (3) an anti-idiotype antibody specific for the monoclonal antibody of (2); (4) a hybridoma cell line producing the memoclonal antibody of (2). Antibodies specific for alpha d can be used in immunohistochemical analysis to localise alpha d to subcellular compartments or individual cells within tissues. Substances that modulate alpha d binding (which may include antibodies) can be used to treat diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung
